

OSSTEM[®] SA Surface IMPLANT

SA : Sand blasted with alumina and Acid etched surface

- Optimal morphology : Combination of crater and micro-pit
- Optimal surface roughness
- Early cell response : 20% faster than RBM
- Early bone healing : 20% faster than RBM
- Early loading possible after 6 weeks of placement.

OSSTEM SA & 'S' surface morphology and roughness increased by 45% compared to RBM treatment.

OSSTEM[®]
IMPLANT

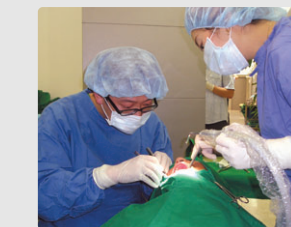

AIC Education Program / MS Implant

www.aicimplant.com

Implant Basic training
from the basic concepts of implants to various practice sessions, live surgery and prosthesis fabrication on patients: this course seeks to produce clinical experts with systemic theoretical knowledge and skills

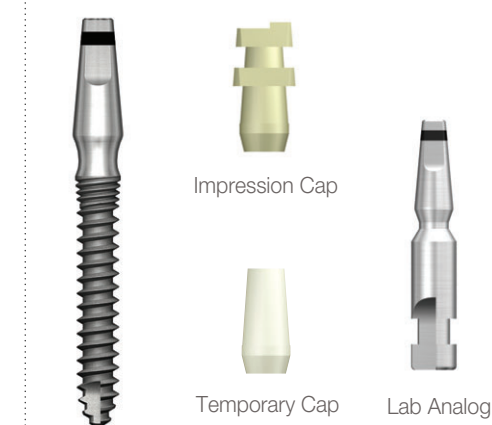

Sinus surgery training
from the basic concepts of sinus implant procedures to practice live surgery

MS Implant

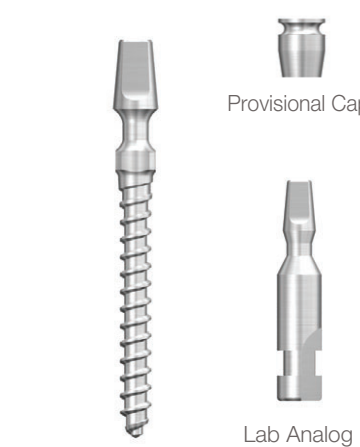

Narrow ridge

- Implant adequate for narrow space such as the mandibular anterior jaw
- Fixture and abutment in one enabling support against masticatory pressure; micro thread design enhances the distribution of masticatory force

Provision

- Implant to be used for the immediate mounting of temporary prosthesis for completely or partially edentulous patients
- Neck designed for path compensation and intensity support

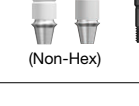

Denture

- Denture-type implant to be used in case of small bone width for edentulous patients or if regular implant is inappropriate
- Micro thread on top helps distribute masticatory pressure to the alveolar bone; more advantageous for immediate prosthetic mounting
